Package:Aspose.Slides.NET

Version:21.10.0

project URL:<https://products.aspose.com/slides>

Description:Aspose.Slides for .NET is a comprehensive on-premise API that seamlessly integrates into your .NET applications and enhances their capabilities to make them work with Microsoft PowerPoint® and OpenDocument presentation file formats (PPT, PPTX, POT, POTX, PPS, PPSX, ODP, OTP, etc.).

Clouddockit - 10.0 Third-Party Software

Without having to install a PowerPoint program or any 3rd party component, you can use Aspose.Slides to build different types of .NET applications, e.g., Windows Forms Apps, Windows Web Apps, as well as to deploy Web Services. For example, Aspose, using its own APIs, developed a free web application (<https://products.aspose.app/slides/conversion/ppt-to-word>) that allows people to convert their PPT files to Word online.

Aspose.Slides for .NET can be used to create, edit, format, merge, split, save, render, print, and convert presentations. It can be used to work with presentation slides, content, design, security, properties, comments, notes, animations, and VBA macros. You can also work with the 3D aspects of PowerPoint presentations (rotation, depth, extrusion, gradient, WordArt). You can accurately convert your presentation files to numerous popular file formats, such as PDF, XPS, TIFF, HTML, etc.

With Aspose.Slides for .NET, you can implement many complicated scenarios for managing tons of presentations. You get to merge and split presentations, clone and compare slides, work with multiple slide masters and layouts, modify presentation viewer and password-protection properties. You can manage tables, math equations, BLOBs, MSO charts, SmartArts, animations, audio/video frames, OLE objects, slides notes, and comments.

Aspose.Slides for .NET supports operations with Microsoft PowerPoint (97 to 2019), MS PowerPoint for Mac, and Office 365. It can be used on any 32-bit or 64-bit OS, where .NET Framework, .NET Core, or Mono framework is available: MS Windows Desktop and Server editions, popular flavors of Linux, macOS X. COM Interop Support (COM, C++, VB.NET) is also available. Aspose.Slides for .NET can also be used on Azure and AWS.

Package:AsyncEnumerator

Version:2.2.1

project URL:<https://github.com/Dasync/AsyncEnumerable>

Description:Introduces IAsyncEnumerable, IAsyncEnumerator, ForEachAsync(), and ParallelForEachAsync()

GitHub: <https://github.com/Dasync/AsyncEnumerable>

PROBLEM SPACE

Clouddokit - 10.0 Third-Party Software

Helps to (a) create an element provider, where producing an element can take a lot of time due to dependency on other asynchronous events (e.g. wait handles, network streams), and (b) a consumer that processes those element as soon as they are ready without blocking the thread (the processing is scheduled on a worker thread instead).

EXAMPLE

```
using System.Collections.Async;
```

```
static IEnumerable<int> ProduceAsyncNumbers(int start, int end)
{
    return new AsyncEnumerable<int>(async yield => {

        // Just to show that ReturnAsync can be used multiple times
        await yield.ReturnAsync(start);

        for (int number = start + 1; number <= end; number++)
            await yield.ReturnAsync(number);

        // You can break the enumeration loop with the following call:
        yield.Break();

        // This won't be executed due to the loop break above
        await yield.ReturnAsync(12345);
    });
}
```

```
// Just to compare with synchronous version of enumerator
static IEnumerable<int> ProduceNumbers(int start, int end)
{
    yield return start;

    for (int number = start + 1; number <= end; number++)
        yield return number;

    yield break;

    yield return 12345;
}
```

```
static async Task ConsumeNumbersAsync()
{
    var asyncEnumerableCollection = ProduceAsyncNumbers(start: 1, end: 10);
    await asyncEnumerableCollection.ForEachAsync(async number => {
        await Console.Out.WriteLineAsync($"{number}");
    });
}
```

Cloudokit - 10.0 Third-Party Software

```
}  
  
// Just to compare with synchronous version of enumeration  
static void ConsumeNumbers()  
{  
    var enumerableCollection = ProduceNumbers(start: 1, end: 10);  
    foreach (var number in enumerableCollection) {  
        Console.Out.WriteLine($"{number}");  
    }

Package:log4net

Version:2.0.12

project URL:<https://logging.apache.org/log4net/>

Description:log4net is a tool to help the programmer output log statements to a variety of output targets. In case of problems with an application, it is helpful to enable logging so that the problem can be located. With log4net it is possible to enable logging at runtime without modifying the application binary. The log4net package is designed so that log statements can remain in shipped code without incurring a high performance cost. It follows that the speed of logging (or rather not logging) is crucial.

At the same time, log output can be so voluminous that it quickly becomes overwhelming. One of the distinctive features of log4net is the notion of hierarchical loggers. Using these loggers it is possible to selectively control which log statements are output at arbitrary granularity.

log4net is designed with two distinct goals in mind: speed and flexibility

Description: Azure Key Vault enables users to store and use cryptographic keys within the Microsoft Azure environment. Azure Key Vault supports multiple key types and algorithms and enables the use of Hardware Security Modules (HSM) for high value customer keys. In addition, Azure Key Vault allows users to securely

Clouddotkit - 10.0 Third-Party Software

store secrets in a Key Vault; secrets are limited size octet objects and Azure Key Vault applies no specific semantics to these objects. A Key Vault may contain a mix of keys and secrets at the same time, and access control for the two types of object is independently controlled. Users, subject to appropriate authorization, may: 1) Manage cryptographic keys using Create, Import, Update, Delete and other operations 2) Manage secrets using Get, Set, Delete and other operations 3) Use cryptographic keys with Sign/Verify, WrapKey/UnwrapKey and Encrypt/Decrypt operations. Operations against Key Vaults are authenticated and authorized using Azure Active Directory. Key Vault now supports certificates, a complex type that makes use of existing key and secret infrastructure for certificate operations. KV certificates also support notification and auto-renewal as well as other management features.

This library has been replaced by the following new Azure SDKs. You can read about the new Azure SDKs at <https://aka.ms/azsdkvalueprop>.

The latest libraries to interact with the Azure KeyVault service are:

- * <https://www.nuget.org/packages/Azure.Security.KeyVault.Keys>
- * <https://www.nuget.org/packages/Azure.Security.KeyVault.Secrets>
- * <https://www.nuget.org/packages/Azure.Security.KeyVault.Certificates>

It is recommended that you move to the new package.

Package: Microsoft.Bcl

Version: 1.1.8

project URL: <http://go.microsoft.com/fwlink/?LinkID=280057>

Description: This package enables projects targeting down-level platforms to use some of the types added in later versions including:

- CallerMemberNameAttribute
- CallerLineNumberAttribute
- CallerFilePathAttribute
- Tuple<T1, T2, ...>
- IProgress<T>
- IStructuralComparable
- IStructuralEquatable
- Task
- InvalidDataException

These types are "unified" to their later version equivalent. For example, when running on .NET Framework 4.5, IProgress<T> from this package will be seen by the runtime as the same type as the one already available in the platform.

Supported Platforms:

- .NET Framework 4 (with KB2468871)
- Windows 8
- Windows Phone 8.1
- Windows Phone Silverlight 7.5
- Silverlight 4
- Portable Class Libraries

This package is only required for projects targeting .NET Framework 4.5, Windows 8, Windows Phone Silverlight 8, or Windows Phone 8.1 when consuming a library that uses this package.

Package:Microsoft.Data.OData

Clouddokit - 10.0 Third-Party Software

Version:5.8.4

project URL:<http://odata.github.io/>

Description:This version of the library supports earlier versions of the Microsoft OData (V1-V3) protocol only and is not under active development. OData V1-V3 has been superseded by OData V4, which is an industry standard published by OASIS and ratified by ISO. OData V4 is supported through the OData V4 compliant core libraries available at: <https://www.nuget.org/packages/Microsoft.OData.Core/> with support documentation available at: <https://odata.github.io/odata.net>. Note that Asp.Net developers can build OData V4 services using the higher-level OData V4 WebAPI libraries available at:

<https://www.nuget.org/packages/Microsoft.AspNet.OData/> with support documentation available at: <https://odata.github.io/WebApi/>.

Classes to serialize, deserialize and validate OData payloads. Enables construction of OData producers and consumers. Targets .NET 4.0, Silverlight 4.0 or .NET Portable Lib with support for .NET 4.0, SL 5.0, Win Phone 8, Win Phone 8.1, and Win 8. Localized for CHS, CHT, DEU, ESN, FRA, ITA, JPN, KOR and RUS.

.NET Framework Recommended during Preview:

At this time, applications looking to use the Microsoft Azure Management Libraries should use the .NET Framework. Management operations require the X509Certificate2 type that is not present in the Portable Class Library API surface area. The Common.NetFramework library exposes this functionality. Looking to the future, we are enabling PCL early: Microsoft Azure Active Directory integration enables token-based authentication. Coupled with appropriate platform-specific libraries, in the future more platforms will light up with support for managing Microsoft Azure services.

Supported Portable Library Platforms:

- .NET Framework 4.5, 4.5.1
- .NET for Windows Store apps
- Windows Phone 8, 8.1
- Silverlight 5
- Portable Class Libraries

Description:Prism is a fully open source version of the Prism guidance originally produced by Microsoft Patterns & Practices. Prism provides an implementation of a collection of design patterns that are helpful in writing well structured and maintainable XAML applications, including MVVM, dependency injection, commanding, event aggregation, and more. Prism's core functionality is a shared code base in a Portable Class Library targeting these platforms; WPF, and Xamarin Forms. Features that need to be platform specific are implemented in the respective libraries for the target platform.

Version:8.0.0.1909

project URL:<https://github.com/PrismLibrary/Prism>

Description:Prism is a fully open source version of the Prism guidance originally produced by Microsoft Patterns & Practices. Prism provides an implementation of a collection of design patterns that are helpful in writing well structured, maintainable, and testable XAML applications, including MVVM, dependency injection, commanding, event aggregation, and more. Prism's core functionality is a shared library targeting the .NET Framework and .NET Standard. Features that need to be platform specific are implemented in the respective libraries for the target platform (WPF, Uno Platform, and Xamarin Forms).

Prism.Wpf helps you more easily design and build rich, flexible, and easy to maintain Windows Presentation Foundation (WPF) desktop applications. This library provides user interface composition as well as modularity support.

license Type:MIT

Package:System.Net.Http

Version:4.3.3

project URL:<https://dot.net/>

Description:Provides a programming interface for modern HTTP applications, including HTTP client components that allow applications to consume web services over HTTP and HTTP components that can be used by both clients and servers for parsing HTTP headers.

Commonly Used Types:

System.Net.Http.HttpResponseMessage

System.Net.Http.DelegatingHandler

System.Net.Http.HttpRequestException

System.Net.Http.HttpClient

System.Net.Http.MultipartContent

System.Net.Http.Headers.HttpContentHeaders

System.Net.Http.HttpClientHandler

System.Net.Http.StreamContent

System.Net.Http.FormUrlEncodedContent

System.Net.Http.HttpMessageHandler

When using NuGet 3.x this package requires at least version 3.4.

licenseUrl:<http://go.microsoft.com/fwlink/?LinkId=329770>

license Type:MS-EULA

Package:System.Net.Http.WinHttpHandler

Version:5.0.0

project URL:<https://github.com/dotnet/runtime>

Description:Provides a message handler for `HttpClient` based on the WinHTTP interface of Windows. While similar to `HttpClientHandler`, it provides developers more granular control over the application's HTTP communication than the `HttpClientHandler`.

Commonly Used Types:

System.Net.Http.WinHttpHandler

When using NuGet 3.x this package requires at least version 3.4.

license Type:MIT

Package:System.Security.Cryptography.Algorithms

Cloudokit - 10.0 Third-Party Software

Version:4.3.0

project URL:<https://dot.net/>

Description:Provides base types for cryptographic algorithms, including hashing, encryption, and signing operations.

Commonly Used Types:

System.Security.Cryptography.Aes

System.Security.Cryptography.RSA

System.Security.Cryptography.RSAParameters

System.Security.Cryptography.HMACSHA1

System.Security.Cryptography.SHA256

System.Security.Cryptography.SHA1

System.Security.Cryptography.SHA512

System.Security.Cryptography.SHA384

System.Security.Cryptography.HMACSHA256

System.Security.Cryptography.MD5

System.Security.Cryptography.HMACSHA384

System.Security.Cryptography.HMACSHA512

When using NuGet 3.x this package requires at least version 3.4.

licenseUrl:<http://go.microsoft.com/fwlink/?LinkId=329770>

license Type:MS-EULA

Package:System.Security.Cryptography.Encoding

Version:4.3.0

project URL:<https://dot.net/>

Description:Provides types for representing Abstract Syntax Notation One (ASN.1)-encoded data.

Commonly Used Types:

System.Security.Cryptography.AsnEncodedData

System.Security.Cryptography.Oid

System.Security.Cryptography.OidCollection

When using NuGet 3.x this package requires at least version 3.4.

licenseUrl:<http://go.microsoft.com/fwlink/?LinkId=329770>

license Type:MS-EULA

Package:System.Security.Cryptography.Primitives

Version:4.3.0

project URL:<https://dot.net/>

Description:Provides common types for the cryptographic libraries.

Commonly Used Types:

System.Security.Cryptography.ICryptoTransform

System.Security.Cryptography.AsymmetricAlgorithm

Clouddokit - 10.0 Third-Party Software
System.Security.Cryptography.SymmetricAlgorithm
System.Security.Cryptography.HashAlgorithm
System.Security.Cryptography.KeyedHashAlgorithm
System.Security.Cryptography.HMAC
System.Security.Cryptography.KeySizes
System.Security.Cryptography.CryptographicException
System.Security.Cryptography.CipherMode
System.Security.Cryptography.PaddingMode
System.Security.Cryptography.CryptoStream
System.Security.Cryptography.CryptoStreamMode

When using NuGet 3.x this package requires at least version 3.4.

licenseUrl:<http://go.microsoft.com/fwlink/?LinkId=329770>

license Type:MS-EULA

Package:System.Security.Cryptography.X509Certificates

Version:4.3.0

project URL:<https://dot.net/>

Description:Provides types for reading, exporting and verifying Authenticode X.509 v3 certificates. These certificates are signed with a private key that uniquely and positively identifies the holder of the certificate.

Commonly Used Types:

System.Security.Cryptography.X509Certificates.X509Certificate2

System.Security.Cryptography.X509Certificates.X509Certificate

System.Security.Cryptography.X509Certificates.X509ContentType

System.Security.Cryptography.X509Certificates.StoreLocation

System.Security.Cryptography.X509Certificates.StoreName

System.Security.Cryptography.X509Certificates.X509FindType

System.Security.Cryptography.X509Certificates.X509ChainStatus

System.Security.Cryptography.X509Certificates.X509Certificate2Collection

System.Security.Cryptography.X509Certificates.X509EnhancedKeyUsageExtension

System.Security.Cryptography.X509Certificates.X509Chain

When using NuGet 3.x this package requires at least version 3.4.

Package:WindowsAzure.Storage

Version:9.3.3

project URL:<https://github.com/Azure/azure-storage-net>

Description:NOTE: As of version 9.4.0, this library has been split into multiple parts and replaced: See

<https://www.nuget.org/packages/Microsoft.Azure.Storage.Blob/>,

<https://www.nuget.org/packages/Microsoft.Azure.Storage.File/>,

<https://www.nuget.org/packages/Microsoft.Azure.Storage.Queue/>, and

<https://www.nuget.org/packages/Microsoft.Azure.Storage.Common/>.

For table support, see <https://www.nuget.org/packages/Microsoft.Azure.CosmosDB.Table/>.

This client library enables working with the Microsoft Azure storage services which include the blob and file service for storing binary and text data, the table service for storing structured non-relational data, and the queue service for storing messages that may be accessed by a client.

For this release see notes - <https://github.com/Azure/azure-storage-net/blob/master/README.md> and <https://github.com/Azure/azure-storage-net/blob/master/changelog.txt>
